RISK	Likelihood (on Risk Matrix)	Impact (on Risk Matrix)	MITIGATION
Full functionality of project not complete - Due to the strict time constraint of the project and lack of experience, final deliverable may not include full functionality outlined in project brief.	Unlikely	Low Medium	Attempt to complete as much of the project by required deadline, ensuring that time constraint issues are outlined during presentation.
Network Failure - Network failure can result in the inability to push my work to Github and also in the inability to present on the presentation day.	Moderate	Medium High	Having a backup internet source will be useful in this scenario. As a result I will utilise my mobile wifi in the event of a network outage.
Illness (Unforeseen Circumstance) - Inability to complete project to required deadline and timeframe due to illness.	Low	Low	Due to coronavirus and current norovirus outbreaks, ensure to stay protected (face-masks and hand sanitiser) when going out during project week.
System Failure - System failure such as a laptop software crash or even worse, a hardware failure, could potentially result in lost project data.	Highly Unlikely	Major	Use of continuous integration, using the feature-branch model to frequently push working copies of code to my Git Repository, ensuring that I will always have the most recent version of my project in the event of a system failure.
Poor Integration - Implementation needs to be done correctly	Moderate	Medium	Signs may not be obvious, so need to pay attention to the code. External insight will be beneficial to help mitigate this.
